CREATE A CHATBOT IN PYTHON

PHASE 3

DEVELOPMENT PART 1:

Start building the chatbot model by loading and preprocessing the dataset.

STEPS TO FOLLOW WHEN WE WILL BEGIN TO IMPORT NECESSARY LIBRARIES ARE:

➢ Numpy - NumPy is a Python library used for working with arrays. It also has functions for working in domain of linear algebra, fourier transform, and matrices.

➢ Pandas - Pandas is a Python library used for working with data sets. It has functions for analyzing, cleaning, exploring, and manipulating data.

➢ Matplotlib - Matplotlib is a comprehensive library for creating static, animated, and interactive visualizations in Python.

➢ Seaborn – Seaborn is a Python data visualization library based on matplotlib. It provides a high-level interface for drawing attractive and informative statistical graphics.

➢ Textvectorization – holds a mapping between string tokens and integer indices.

➢ Tensorflow – python library for fast numerical computation

#import the required libraries

In [1]:

```
import tensorflow as tf
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
from tensorflow.keras.layers import TextVectorization
import re,string
from tensorflow.keras.layers import LSTM,Dense,Embedding,Dropout,LayerNormalization
```

Load the dataset

In [2]:

```
df=pd.read_csv('/kaggle/input/simple-dialogs-for-chatbot/dialogs.txt',sep='\t',names=['questio
n','answer'])
print(f'Dataframe size: {len(df)}')
df.head()
```

```
Dataframe size: 3725
```

Output:

Out[2]:

	question	answer
0	hi, how are you doing?	i'm fine. how about yourself?
1	i'm fine. how about yourself?	i'm pretty good. thanks for asking.
2	i'm pretty good. thanks for asking.	no problem. so how have you been?
3	no problem. so how have you been?	i've been great. what about you?
4	i've been great. what about you?	i've been good. i'm in school right now.

DATA PROCESSING:

Data preprocessing is the concept of changing the raw data into a clean data set. The dataset is preprocessed in order to check missing values, noisy data, and other inconsistencies before executing it to the algorithm.

STEPS IN DATA PROCERSSING ARE:

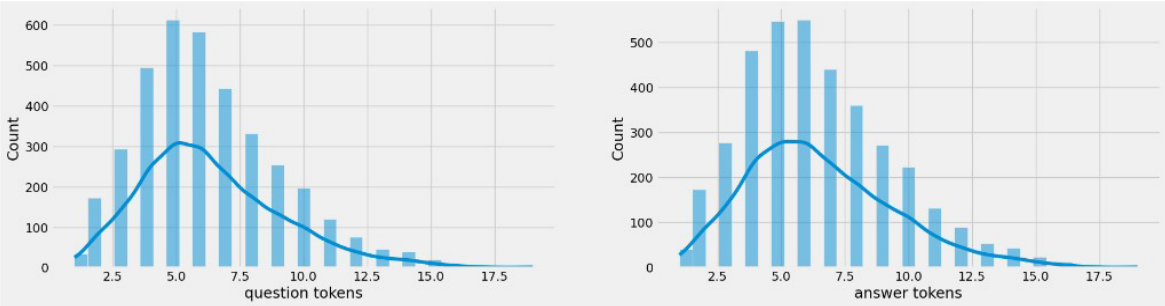
- Data Visualization.
- Text cleaning.
- Tokenization.

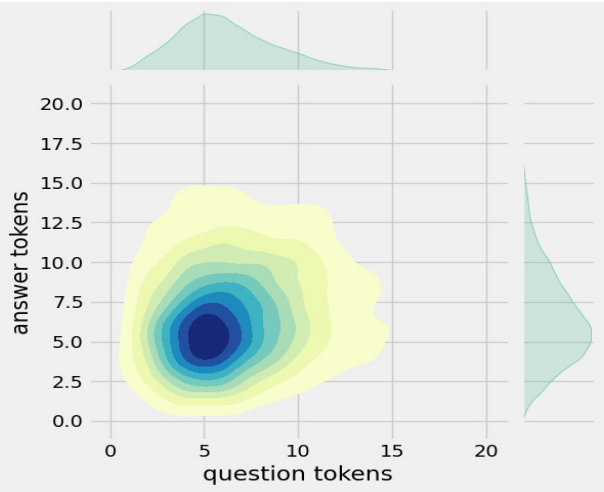
Data Visualization

In [3]:

```
df['question tokens']=df['question'].apply(lambda x:len(x.split()))
df['answer tokens']=df['answer'].apply(lambda x:len(x.split()))
plt.style.use('fivethirtyeight')
fig,ax=plt.subplots(nrows=1,ncols=2,figsize=(20,5))
sns.set_palette('Set2')
sns.histplot(x=df['question tokens'],data=df,kde=True,ax=ax[0])
sns.histplot(x=df['answer tokens'],data=df,kde=True,ax=ax[1])
sns.jointplot(x='question tokens',y='answer tokens',data=df,kind='kde',fill=True,cmap='YlGnBu')
plt.show()
```

Output:





Text Cleaning:

In [4]:

```
def clean_text(text):
    text=re.sub('-',' ',text.lower())
    text=re.sub('[.]',' . ',text)
    text=re.sub('[1]',' 1 ',text)
    text=re.sub('[2]',' 2 ',text)
    text=re.sub('[3]',' 3 ',text)
    text=re.sub('[4]',' 4 ',text)
    text=re.sub('[5]',' 5 ',text)
    text=re.sub('[6]',' 6 ',text)
    text=re.sub('[7]',' 7 ',text)
    text=re.sub('[8]',' 8 ',text)
    text=re.sub('[9]',' 9 ',text)
    text=re.sub('[0]',' 0 ',text)
    text=re.sub('[,]',' , ',text)
    text=re.sub('[?]',' ? ',text)
    text=re.sub('[!]',' ! ',text)
    text=re.sub('[$]',' $ ',text)
```

```
    text=re.sub('[$]',' $ ',text)
    text=re.sub('[&]',' & ',text)
    text=re.sub('[/]',' / ',text)
    text=re.sub('[:]',' : ',text)
    text=re.sub('[;]',' ; ',text)
    text=re.sub('[*]',' * ',text)
    text=re.sub('[\']',' \' ',text)
    text=re.sub('[\"]',' \" ',text)
    text=re.sub('\t',' ',text)
    return text

df.drop(columns=['answer tokens','question tokens'],axis=1,inplace=True)
df['encoder_inputs']=df['question'].apply(clean_text)
df['decoder_targets']=df['answer'].apply(clean_text)+' <end>'
df['decoder_inputs']='<start> '+df['answer'].apply(clean_text)+' <end>'

df.head(10)
```

OUTPUT:

Out[4]:

	question	answer	encoder_inputs	decoder_targets	decoder_inputs

```

Challenges:

- ✔ Datasets often have missing values, which can adversely affect the performance of machine learning models.
- ✔ Outliers can significantly impact the mean and standard deviation, leading to skewed results and inaccurate predictions.
- ✔ Machine learning algorithms typically work with numerical data, so categorical variables need to be transformed into a numerical format.
- ✔ Features in the dataset may have different scales, which can affect the performance of

algorithms like k-nearest neighbors or gradient descent-based methods.

- ✔ In classification problems, the classes might be imbalanced, leading the model to be biased towards the majority class

- ✔ Determining which features are relevant and how to create new meaningful features from the existing ones can be complex.

- ✔ Information from the testing/validation set inadvertently influences the training process, leading to overfitting and inaccurate model evaluation.
